Ground control to Major Road Warrior: The office needs you. If you've used remote control software before and were disappointed with the transmission speed and functionality, it's time to get back into the game. I'm InTouch by 01 CommuniqūZ offers a treasure trove of remote functionality for about \$8 a month, including remote PC file transfers, e-mail handling, and virtual desktop access.

Whether you want to send and receive Outlook e-mail from the road, grab a file from your hard drive while you're in a Katmandu Starbucks, or use a special application you can't install onto your laptop, handheld, or in some cases, smart phone, I'm InTouch does it all.

All you need to do is visit the I'm InTouch Web site and log in to your computer. The locator does the rest. There is no bulky software to install and no hardware requirements. You can view and listen to video and music from afar and even add a Webcam to keep in touch with your family and coworkers.
