

Introduction

01 PC Finder software is used when installing I'm InTouch on multiple PCs in a Local Area Network (LAN) sharing a single Internet connection. 01 PC Finder is installed on the Internet gateway computer. The Internet gateway computer is connected directly to the Internet or is receiving 'Port Forwarding' data directly from a router in the network.

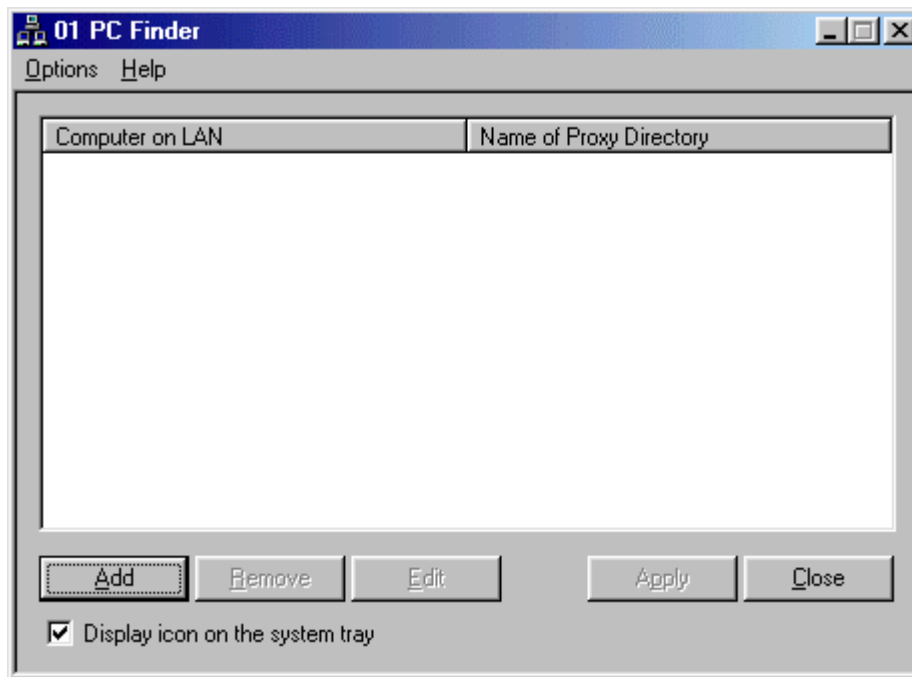

Requirements

- Windows™ 98 Second Edition (SE), Me, NT 4.0 Workstation, 2000, XP Professional, XP Home
- 7 MB of Hard Disk space

Launching 01 PC Finder

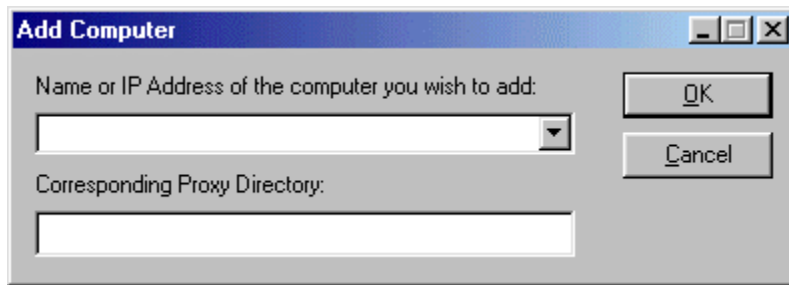

01PC Finder will map the computer name on the Local Area Network and assign an alias name to it.

The main interface is the configuration dialog with options to Add, Remove or Edit computer mapping.

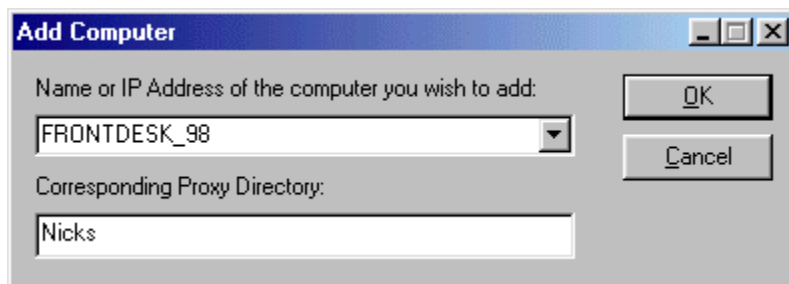

Add

Mouse click on the Add button displays the following dialog:

Pick the I'm InTouch computer name from a list of LAN computers. Then enter a Proxy Directory name.

If you select the drop down list, you will find a list of PC's that are currently on the LAN. You can select from the list or add your own. A proxy directory must be entered, which is the registered Proxy Directory name of the I'm InTouch software on the chosen PC.

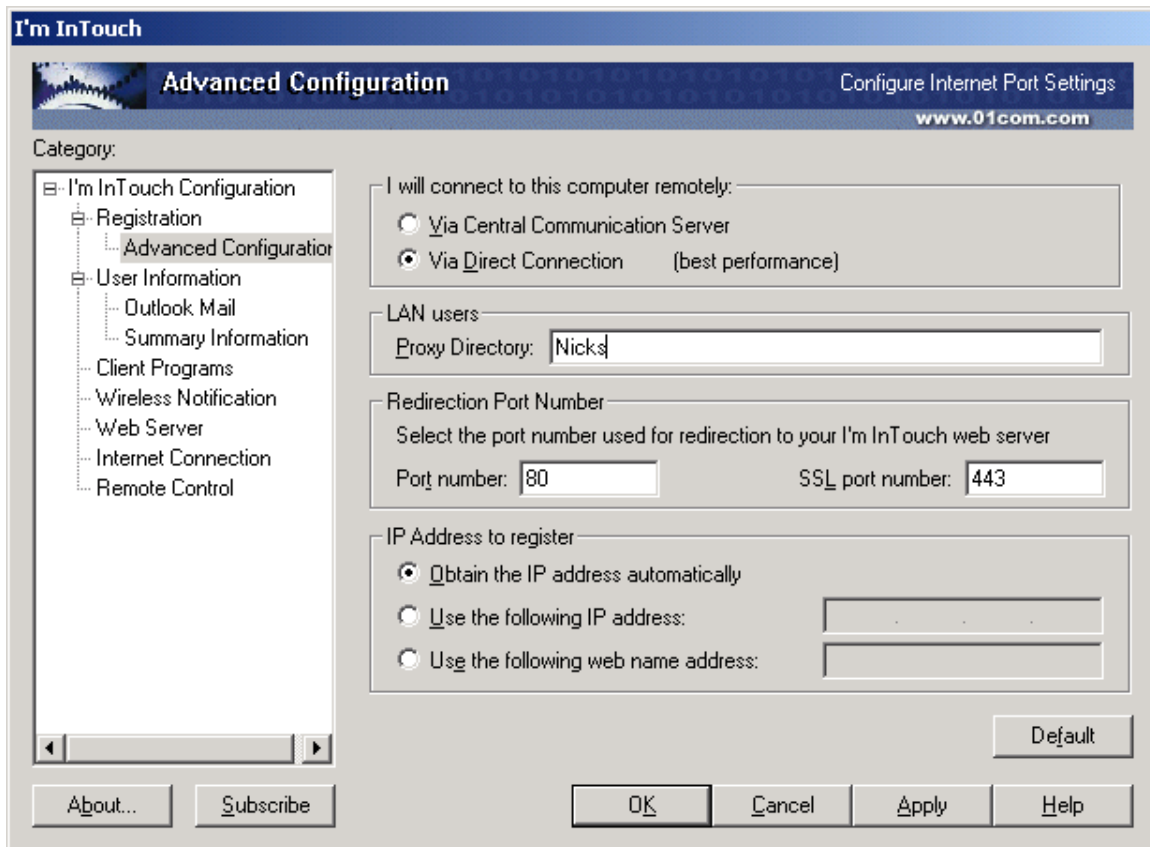

TIP: The Proxy Directory Name is limited to a maximum of 256 characters in length. It can only consist of numbers, letters and the following special characters:

Allowable Special Characters List

` ~ ! @ \$ ^ & () - _ + = { } [] ; ' . ,

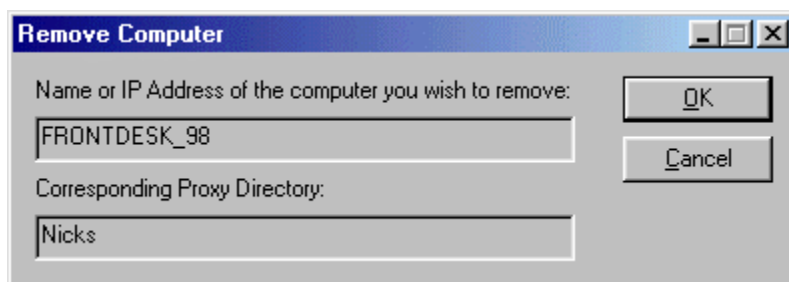

Click OK to close the “Add Computer” dialog and then apply the changes. Once you click ‘OK’, your changes are saved but not applied. You must press ‘Apply’ on the main configuration screen for the changes to take effect.

On the I'm InTouch computer, enter the same Proxy Directory name in the Advanced Configuration dialog, and click on ‘Apply’ button.

Remove

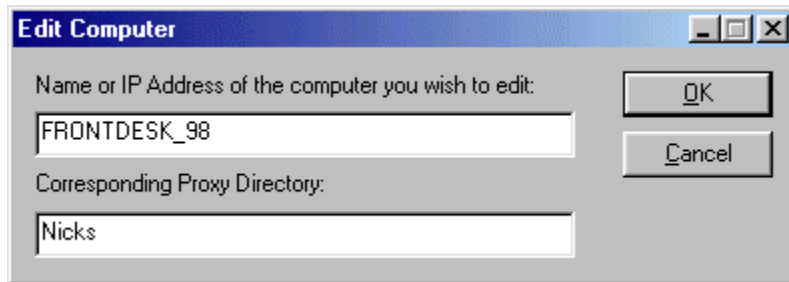

In order to remove any entry from 01 PC Finder configuration, select the entry to be removed and click on the 'Remove' button. The following dialog appears for confirmation:

Once you click on 'OK', your changes are saved but not applied. You must press 'Apply' on the main configuration screen for the changes to take effect.

Edit

If you wish to change the configuration for any entry, select the entry and click on 'Edit' button. The following dialog appears allowing you to make changes.

Once you select "OK", your changes are saved but not applied. You must press 'Apply' on the main configuration screen for the changes to take effect. The 'Apply' button will make changes to the registry and the Web Server configuration. This process may take about 30 seconds.

If you wish to show the 01 PC Finder icon on the system tray, check mark the 'Display icon on the system tray' on the main configuration dialog.

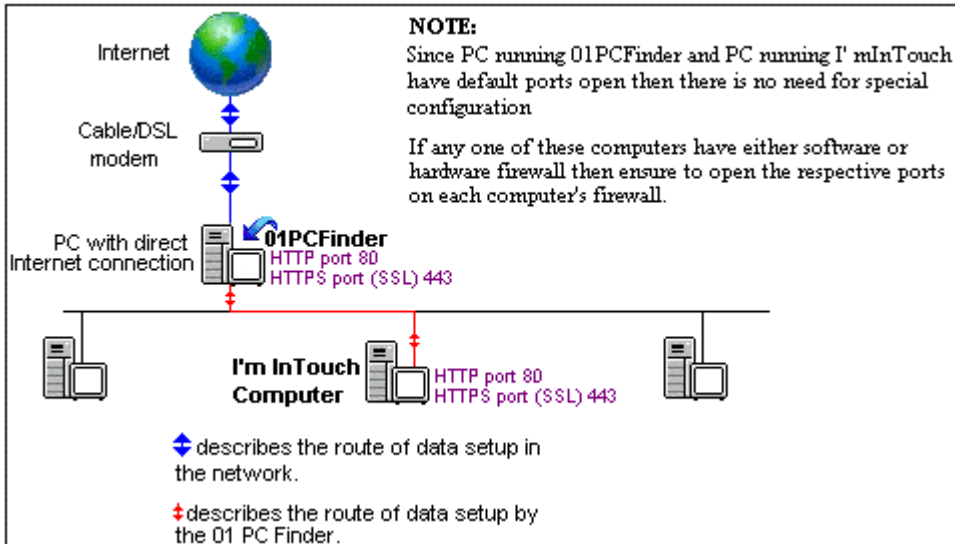

Once the click on the 'Close' button, the 01 PC Finder dialog will disappear but the application will not shut down. The program will remain active on the computer and its icon will show on the system tray (if check marked on the main configuration dialog).

If you wish to disable the 01 PC Finder application right-click on its icon on the system tray and choose 'Exit'.

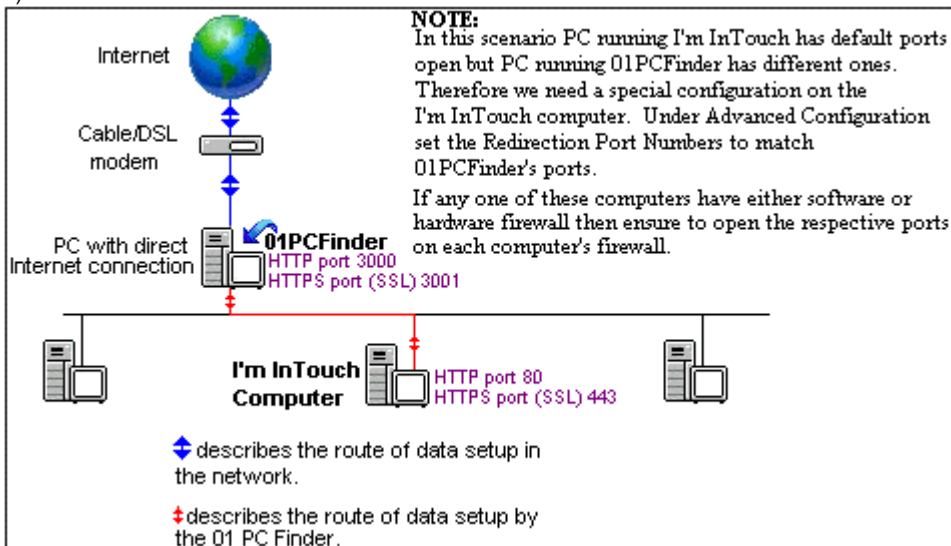

Settings

01PC Finder is used to facilitate remote access HTTP or HTTPS requests to the I'm InTouch computer in the following scenarios:

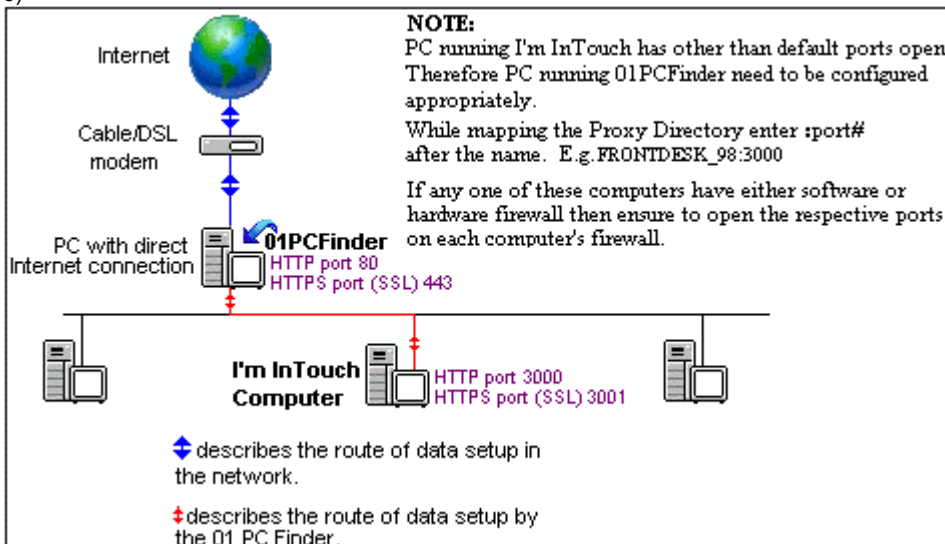

- 1) Recommended – I'm InTouch's standard installation and default settings

- 2)

3)

The picture below shows mapping a computer name or its IP address to a Proxy Directory on 01 PC Finder.

Add Computer

Name or IP Address of the computer you wish to add:
 FRONTDESK_98:3000

Corresponding Proxy Directory:
 Nicks

OK
 Cancel
