

Zone Alarm Setup for I'm InTouch

1. Open your Zone Alarm Pro setup window and make sure you are in the Status tab.

2. Select the Program Control option and click the Add button on the bottom right of the program window.
3. You must now add all the appropriate I'm InTouch program files listed below:

- IIT.exe** (can be found at C:\Program Files\01 Com\I'm InTouch\BIN)
- Rdesktop.exe** (can be found at C:\Program Files\01 Com\I'm InTouch\BIN)
- Agent.exe** (can be found at C:\Program Files\01 Com\Webserver)
- Apache.exe** (can be found at C:\Program Files\01 Com\Webserver)
- Outlk01.exe** (can be found at C:\Program Files\01 Com\I'm InTouch\BIN)
- 01updt.exe** (can be found at C:\Program Files\01 Com\I'm InTouch)
- OEREMOTE.EXE** (can be found at C:\Program Files\01 Com\I'm InTouch\BIN) – for Outlook Express

4. Once all these files are added you must allow access for all of them. To do this go to the Access column and you will see 2 question marks (?) under the Trusted and Internet Field. You must have two check marks in each field. Click on each of the (?) marks under each field and select Allow for both Trusted and Internet.

The screenshot shows the ZoneAlarm Pro interface. The 'Program Control' window is open, displaying a list of programs and their access permissions. A context menu is open over the 'IIT.exe' row, showing options: Allow (checked), Block, and Ask.

Buttons: Add, Options

All the I'm InTouch components should have green check marks as shown in the diagram below. Once complete, you can close Zone Alarm and continue working with I'm InTouch.

Program Control

These are programs that have tried to access the Internet or local network.

Access and Server columns show the permissions the program has for each Zone.

Change a program's permissions by left-clicking the icons in the Access or Server column.

Active Programs	Access		Server		Send Mail
